

Sulman Malik

Infrastructure & Cloud Engineer – London, UK

Email: sulmanmlk96@gmail.com / **Tel:** 07480652107 / **Portfolio:** <https://sulmanm96.github.io/MyPortfolio>

Professional Summary

Infrastructure & Cloud Engineer with 6+ years of experience designing, deploying, and supporting scalable IT solutions across Azure, AWS, and hybrid environments. Proven track record in cloud architecture, automation, and security. Skilled in stakeholder engagement, technical troubleshooting, and delivering high-impact infrastructure projects for SMEs and MSPs.

Core Skills & Technologies

Cloud Platforms

Azure (IaaS, PaaS, Monitoring, Storage Accounts, Backup, Site Recovery, Vaults, VNets), AWS (EC2, IAM, VPC, S3)

DevOps & Automation

Azure DevOps, PowerShell, Bicep, CI/CD, Git, Power Automation

Security & Identity

Entra ID, RBAC, Conditional Access, Defender, Sentinel, Active Directory, B2B, SSO.

Infrastructure & Networking

Windows Server (DNS, DHCP, AD), VMware, Hyper-V, LAN/WAN, VPN, VLANs

Monitoring & DR

Azure Monitor, Veeam, Azure MARS, Acronis, Wasabi

Device Management

Intune, ScaleFusion, Apple MDM

Certifications

Microsoft Azure

AZ-305, AZ-104, AZ-140, AZ-700, AZ-800/801, AI-102, AI-900, MS-900, MS-100/101, SC-100

Amazon Web Services (AWS)

AWS Certified Solutions Architect Associate, AWS Certified Cloud Practitioner

Experience

Independent Cloud Projects (Ad-Hoc Engagements) (Oct 2024 – Present)

After a short sabbatical, I delivered ad-hoc Azure and AWS infrastructure support for peers and small businesses. These were real-world, project-based engagements where I applied hands-on expertise to help others set up and optimize their cloud environments.

- Built international Azure Virtual Desktop (AVD) environments for remote access and collaboration
- Deployed SQL-based financial applications in Azure-hosted environments
- Migrated on-premises servers to Azure with minimal disruption
- Set up AWS Elastic Beanstalk with GitHub integration and load balancing to support continuous development workflows
- Created and automated Bicep templates for repeatable infrastructure deployments
- Used Az Automation runbooks to develop PS scripts that extracted client-specific data to designated storage accounts
- Produced high-level design documentation to support maintainability and smooth handovers
- Implemented Azure Backup and Site Recovery to support business continuity and disaster recovery (BCDR)
- Configured Application Gateway with Web Application Firewall (WAF) in Azure and AWS for secure traffic routing
- Deployed multi-region Azure SQL failover groups to ensure high availability
- Optimized cloud spends through reserved instances, budget alerts, and resource tagging
- Conducted security hardening using Azure Policy aligned with Microsoft's Secure Score recommendations
- Built centralized monitoring dashboards using Azure Monitor and Log Analytics

Speedster-IT (Managed IT Service Provider) | London

Infrastructure & Cloud Engineer (Jun 2022 – Mar 2024)

Senior Engineer (Sep 2021 – Jun 2022)

Over 2 years at Speedster-IT, I advanced from mid-level support to leading cloud infrastructure projects and strategic architecture. My work spanned Azure, AWS, and on-prem environments, delivering scalable, secure solutions for SMEs and MSP clients. I modernized legacy systems, automated deployments, and drove operational reliability through hands-on engineering and stakeholder engagement.

- Architected hybrid environments using Azure IaaS/PaaS: VMs, vNets, AKS, WebApps, containers
- Delivered infrastructure projects across Azure & AWS: identity integration, storage provisioning, network segmentation
- Migrated legacy systems (Exchange, GSuite, on-prem) to Microsoft 365 & SharePoint Online
- Implemented Azure Lighthouse for multi-tenant management and streamlined client onboarding
- Applied RBAC, Conditional Access, and Entra ID for secure access control
- Integrated Microsoft Defender & Azure Sentinel for threat detection and response
- Conducted vulnerability assessments and deployed AV/security controls (Bitdefender GravityZone)
- Automated deployments using PowerShell, ARM templates, Terraform, and Bicep
- Configured Azure Monitor and deployed DR solutions: Veeam, Azure MARS, Acronis, Wasabi
- Designed VPN architectures: Site-to-Site, Point-to-Site (AAD auth), VNet peering
- Led full-site cloud onboarding, Intune deployments, and infrastructure modernization
- Provided technical consultation and presales support for cloud strategy and infrastructure design
- Delivered escalated support and field engineering for critical infrastructure issues
- Managed Windows Server stack: DNS, DHCP, AD, Group Policy, gMSA, File & Print Services, Patch Management, Backups, IIS
- Administered VMware/vSphere, Hyper-V, and Azure services
- Configured LAN/WAN networks, switches, and wireless controllers (Aruba, Unifi, Ruckus)
- Managed public DNS and SSL certificates (Cloudflare, Cloud floor, GoDaddy, Comodo, Digicert, etc.)

Nutbourne (Managed IT Service Provider) | London

Senior Analyst (Jul 2020 – Sep 2021)

Mid-Level Analyst (Feb 2020 – Jul 2020)

Junior Support Analyst (Sep 2019 – Feb 2020)

Progressed from 1st-3rd Line support, delivering onsite and remote support for SME clients across London. Acted as a dedicated field engineer and escalation point, ensuring system reliability, stakeholder satisfaction, and seamless coordination with vendors and third parties.

- Provided frontline support across desktop, cloud, and server environments
- Troubleshoot Microsoft 365, Azure, and network issues within SLA
- Delivered device rollouts via Intune, ScaleFusion, and Apple MDM
- Resolved escalated infrastructure issues and liaised with vendors
- Ensured high availability through proactive monitoring and patching
- Coordinated with third parties to resolve complex technical problems
- 3rd Line / Field Engineering: Acted as dedicated onsite engineer for key clients
- Delivered hardware/software installation and infrastructure maintenance
- Managed installed systems and liaised with stakeholders for escalated issue resolution
- Configured, administered, and deployed Office 365 and related applications
- Managed server patching, updates, and resource allocation for infrastructure expansion
- Supported hybrid environments and coordinated with internal IT teams
- Authored high-quality documentation to improve support workflows and operational efficiency
- Contributed to process refinement and escalation handling across support tiers

Education

BSc (Hons) Computer Science - City University, London Sep 2015 - Jan 2019
